### **DETAILED ACTION**

Claims 1-12, 76-96 are pending in the application.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/4/08 has been entered.

#### ***Response to Amendment***

All previous rejections that are not mentioned in this office action are considered withdrawn.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 76-96 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This is a new matter rejection.

The amended claims 76, 81, 86 recite "a yeast host cell which is diminished or depleted in the activity of an initiating  $\alpha$ 1,6-mannosyltransferase and includes an  $\alpha$ 1, 2-

mannosidase activity and a..." Applicants assert that the support for such amendment can be found in examples 19-21 as exemplified by strain YSH-1, YSH-44, YSH-57 and PBP38. A review of the application reveals that all these strains belong to *Pichia pastoris*. The fact of working example in the specification describes the specific generation of such a yeast host cell of one specie that applicant may now wish to extend as broadly covered by the scope of the new claims after the filing date of the as-filed application, does not provide any legal basis showing that applicant is possesses the specific claimed subject matter as claimed in the new claims at the time the invention was made. Thus, this is a new matter rejection. The specification describes several strains of *P. pastoris* that are genetically modified or engineered to depleted with the activity of  $\alpha$ 1,6-mannosyltransferase and include additional enzyme activities by introducing glycosylation enzymes that normally functions in human cells for producing glycoprotein structure that resembles in the structures in human cell. However, the specification does not describe any naturally occurring yeast host cell of other species or genetically modified yeast species. As such, since the original as-filed-specification does not support the newly added limitation, it constitutes new matter.

### ***Specification***

The amendment to specification is noted. However, it is unclear which content of the instant amendment is different from the paragraph [0090] on page 27 as originally filed. Appropriate clarification is recommended to make the record clear.

No claims are allowed.
